Good Afternoon Sir,

It is always very surprising to see what a little ingenuity and time could do. Nevertheless, I have reached out to the City Abatement team and let them know of the new development and it will be handled as soon as possible. I will drive down there today to determine if someone has made it their home. Thank you for reaching out to us and please let us know if you ever need anything from us.

Respectfully,

Deputy Bracamontes, Ryan

Hello Deputy Bracamontes,

Sorry to be the bearer of bad news but it looks like the homeless used some wood to pry the concrete blocks away from the door. I can't tell if they were able to make it inside but if they haven't yet, I'm sure they will very soon.

I just wanted to bring this to your attention so maybe it can be corrected while it's still a new issue. You all put in a lot of work to get this far and we have seen a decrease in break ins at our facility. Let me know if you have any questions.

Thank you and everyone involved for all you have done!

Good afternoon Captain Warren,

Me and my team will certainly get on this and take care of it promptly. I do not want this to become a bigger issue. Thank you and as always if you have any other issues, please feel free to reach out to us anytime.

Respectfully,

Deputy Bracamontes, Ryan

Deputy Bracamontes,

Let me start off by saying what an awesome job your team has done clearing out the encampment at Sepulveda and Alameda. When I first transferred to fire station 127, I thought this was going to be an impossible task. I have been by the area a few times now going on calls, and it looks amazing.

While we have this momentum, I would like to see if we can clear out one more encampment? Underneath the bridge where Sepulveda crosses over the Dominguez Channel (East of Alameda), there are one or two people living under the bridge. They have built a large structure, which contains a loft that they have secured to the underside of the

bridge. When I first contacted Deputy Wilson to get some help with these encampments, this was, and still is the most dangerous one. In the six months I have been assigned to fire station 127, I have responded to three large fires under this bridge. What makes these fires so dangerous, is on the south side of the bridge, there is a 4-inch (300 psi) Hydrogen pipeline. On the north side of the bridge, there is a 12-inch (400 psi) Natural Gas pipeline that feed into the surrounding refineries. If one of these pipelines were to rupture from the fires under this bridge, the blast would be destructive for miles around, and could potentially set off chain reaction explosions with the surrounding refineries. I am attaching a few pictures, some from the fires, and some showing the encampment in its most recent state. If we could try to put the next priority on this encampment, I would be very grateful, and it would help to ensure the safety of my crew and the citizens of Carson.

Thank you again for all your help, and if you have any questions, or need any more information do not hesitate to call.
